

November 7, 2011

Timiskaming Abitibi Trail Association
PO Box 1144
Kirkland Lake ON P2N 3M7

As previously communicated through the Environmental Assessment process, the installation of a 115 kV transmission line, connecting the Young-Davidson Project site to the Hydro One transmission network at Matachewan Junction approximately 4 kilometres east of Matachewan is now nearing completion.

The work included the widening of the existing hydro corridor and the installation of wooden poles structures and guy wires parallel to the existing 44 kV transmission line.

Given that the snowmobile trail is in close proximity to the existing 44 kV transmission line and the new 115 kV transmission line, we wish to ensure that the users of the trail are aware of the new structures and associated guy wires.

We would appreciate your assistance in passing on the information to your membership.

If you or your members have any questions or comments, please contact the undersigned.

We wish you a great season.

Sincerely

Nancy Duquet-Harvey
Environmental Coordinator
